

NEST by Turtledove Cyber

Scanning and reporting that's Cyber Essentials, ISO 27001, and PCI-DSS ready, made accessible for teams of all sizes with a flat fee based on headcount.

NEST is a vulnerability management platform that gives daily updates on vulnerabilities for every device in your organisation. Traditional device management often offers a view on what official patches are available. NEST goes further: it scans for application updates and misconfigurations too, and it does so securely.

Vulnerability management installs a small piece of software on each of your endpoint devices and reports on vulnerabilities, misconfigurations, and any updates needed. NEST launched specifically to satisfy compliance requirements for Cyber Essentials, as well as other requirements that come with standards like ISO 27001 or PCI-DSS.

As of April 2026, this is a functional requirement of Cyber Essentials. Both Cyber Essentials and Cyber Essentials Plus now expect a year-round vulnerability remediation capability, because signing off your submission means attesting to year-round compliance with the controls. That includes detecting and remediating all high and critical vulnerabilities within 14 days.

Sensible features

01

Built openly on IASME approved scanner technology

Competitors run their own secret stack. NEST does not, which produces perfect parity with a Cyber Essentials Plus scan.

02

Vulnerabilities bundled as issues

Findings are grouped into the thing you actually have to fix, which makes remediation clearer and easier to hand to someone.

03

Designed for newbies and power users alike

Default views that make sense on the first login, so no time is wasted building clunky dashboards before the platform is useful.

04

Unlimited user accounts, plus one MSP seat

Every organisation gets unlimited accounts and one MSP access seat. You pay for the outcome, not per seat.

What we're building next

• **Vulnerability inbox**

See only the difference between yesterday and tomorrow, today.

• **Hide or risk-accept issues**

Retire the things you have consciously accepted, rather than having them pester you every day.

• **Sticky notes on assets and issues**

Bring the context that currently lives in your head, or in a spreadsheet, onto the platform.

• **MCP access**

Let your AI agent do the heavy lifting.

• **Spreadsheet and XML reports**

View and download automated reports, and do whatever you want with them.

• **Remediation email drafting**

Auto-draft remediation emails to affected users and save hours a week of wrangling, or produce a bulletin for your infosec stakeholders.

Unlike competitors, NEST is built on IASME approved scanner technology, where others use their own secret stack. That gives you perfect parity with a Cyber Essentials Plus vulnerability scan, which makes it the easiest and most cost effective way to guarantee that you'll pass one.

Pricing

One flat fee for the whole organisation, set by headcount rather than by device or by seat. Every band includes unlimited user accounts and one MSP access seat.

Micro	Small	Medium	Large	Enterprise
Under 10 employees	Under 50 employees	50–250 employees	250–599 employees	600+ employees
£499	£999	£1,999	£2,999	Get in touch
a year + VAT	a year + VAT	a year + VAT	a year + VAT	

Registered charities and not-for-profits pay 50% off list price, plus VAT, in every band.

Design Partner

Fortnightly standups to engineer the features you need, plus custom support.
